

STATEMENT OF CAPACITY

Mining Equipment, Technology and Services (METS)

STATEMENT OF CAPACITY

Mining Equipment, Technology and Services (METS) in the Northern Territory

To support the Mining Equipment, Technology and Services (METS) industry in the Northern Territory, a capability mapping and gap analysis study was undertaken to highlight the supporting trades, services and supply capacity.

The Northern Territory Government commissioned the Industry Capability Network of the Northern Territory (ICN NT) to produce the report.

Information for this report was captured from the ICN database and used to measure the capabilities of businesses within the Darwin, Central, Katherine, East Arnhem and Barkly regions against the likely scopes of work required to service and supply.

With the anticipated increase in opportunities for businesses to provide a service or supply to the METS industry, the study prompts a review into the

industry's current capability and capacity.

In summary, a total of 900 unique businesses were identified in the study and had their capabilities matched against the identified scopes of work on 1698 occasions.

The study also identified 50 unique Aboriginal majority owned businesses whose capabilities were matched to the likely scopes of work on 114 occasions.

The strong Construction Services trade category held the highest capacity with 204 businesses mapped in this category, matching the scopes of work on a total of 324 occasions. The supplier's trade category held the second highest capacity, with 153 businesses matching the scopes of work on a total of 222 occasions. The Civil Services scopes of work held the third highest capacity, as well as a considerably higher content of Aboriginal majority owned business capability than the other

“ *Quality supply and service is critical to our business and we are lucky to be able to access them right here in the Territory.*

In 2017, we dealt with around 500 Territory companies delivering everything from jet charter flights and food through to engineering and consulting services. We've been working with Territory businesses for more than 22 years and always found them to be professional, resilient and well-positioned to deliver what we need, when we need it. ”

Sam Strohmayr
General Manager, McArthur River Mining

scopes within the study, with 13 Aboriginal-owned businesses being matched to the likely scopes of work on 37 occasions.

The study concluded that whilst the NT industry already has a very high capacity to meet the majority of the METS sector's current service and supply requirements, ICN has identified gaps in specialities such as Milling Equipment, Thickeners and Vehicle Wash Bays, where there were no companies identified to service or supply on these packages.

Interviews with mining companies currently undertaking exploration, construction or operating of mines throughout the Northern Territory, indicate that the opportunity for future growth and development is promising. There are also a significant number of additional NT businesses that, while not currently working specifically on mining-related contracts, do have the

capability to provide goods and services to the expanding sector if required.

Key findings from this study include:

- Local industry has a very high capacity to fulfil the service and supply needs of the METS sector across all twelve trade packages mapped in this study
- An opportunity exists to increase the number of Aboriginal majority owned businesses in the sector in both service and supply capacities
- Minor trade gaps have been identified that could result in enabling local industry to acquire new skills to meet these requirements

“ Central Australia is on the cusp of new and exciting mining ventures including the Nolans Project which is moving closer to development. Our project has the potential to provide significant employment and business opportunities to local people and suppliers which will last for decades.

Our goal is to continue boosting local business and industry capability to support our project when in operation. We are confident that by working with Territory businesses we will grow the region's capacity to underpin and service not just our project, but other mining opportunities on the horizon.” ”

Brian Fowler
General Manager, Arafura Resources Limited

CAPABILITY OVERVIEW AND INDEX

Civil

COMMERCIAL PLUMBING

Installation of industrial plumbing systems to site infrastructure, hot water systems and ablutions.

Compliance: Internal quality management system, Building Code 2016

Previous clients: Oil and gas industry, government agencies, major project contractors, defence contractors, mining industry, local councils

FIRE WATER PUMPS

Supply and delivery of skid mounted fire pump systems complete with electric pump/diesel pump/jockey pump and control panel.

Compliance: ISO 9001:2008, AS/NZS 4801:2001, Building Code 2016

Previous clients: Oil and gas industry, government agencies, major project contractors, defence contractors, mining industry, local councils, PowerWater

OILY WATER SEPARATOR

Supply and deliver oily water separator for treatment of water for discharge to settlement ponds.

Compliance: ISO 9001:2008, AS/NZS 4801:2001, ISO 14001:2004

Previous clients: Oil and gas industry, government agencies, major project contractors, defence contractors, mining industry, local councils, PowerWater

REVERSE OSMOSIS PLANT

Supply and delivery of a containerised reverse osmosis plant to meet approximately 1300m³ per day.

ABOUT THE STUDY

Undertaking a Supply Chain Mapping and Gap Analysis Study to support the Mining Equipment, Technology and Services (METS) sector requires an understanding of the industry capabilities needed within supply chains for new and existing mines throughout their exploration, construction and operational phases.

ICN engaged industry experts to ascertain requirements that industry must meet to be involved in the sector, and to identify any barriers to entry. The industry experts consisted of Minerals Council of the NT, NT Government Department of Primary Industry and Resources and a number of mining companies currently undertaking exploration, construction or operational mines throughout the NT.

The extensive information gathered from these experts was reviewed and disseminated by ICN into different classification tiers, scopes, accreditations and/or certification requirements that industry must comply with to engage in the sector. The experts verified this categorised information and provided further advice around the standard minimum requirements to classify capability against the scopes.

The report identifies businesses that hold the current capability to undertake each scope identified. ICN found that most businesses typically had a business size of small to large (5 – 200+ employees) who also had proven experience against each respective scope they are mapped to, and referenced their prior experience working on large scale projects.

KEY REQUIREMENTS FOR INDUSTRY

The diverse METS sector is governed by numerous regulations at both a state and national level. The Minerals Council of Australia has commented that there are three broad METS segments. The service segment is the largest and ranges from the provision of exploration to contract mining services. The second largest segment is focused on equipment provision for mine development, mining and processing. The rapidly growing third segment is focused on the provision of highly specialised technology, equipment, software and related services.

The NTG's Mining and Energy division within the Department of Primary Industry and Resources manages the licencing and approvals for all mining operations and regulates the industry, including inspecting and auditing sites on a regular basis.

Mining operations in the NT must operate in accordance with the Mines Safety Control Act and the Mineral Titles Act (MTA). Contractors who have been contracted to carry out work on the mine site under their own contractor's license (either on a single job basis or on an on-going provision of labour and services basis) are required to complete and issue a Certificate of Compliance (CoC) in accordance with the Mines Safety Control Regulations.

As with all Territory workplaces, mining operations are also regulated under the Work Health and Safety (National Uniform Legislation) Act meaning that any person conducting a business or undertaking must ensure, so far as is reasonably practicable, that the health and safety of workers and others are not put at risk. A mine operator has the duty to submit a risk management plan to the regulator prior to allowing any mining or related activity to commence.

The above three segments include a comprehensive range of company capabilities that can provide specialised products and solutions, from mineral exploration, extraction and mining supply chains mixed with those that can undertake ground works and on ground construction. As the Territory's METS support sector is characterised by a high proportion of local SMEs (albeit at the larger end of the SME scale), and a few large local METS companies and strong participation from global OEMs, the requirements to work in the industry are quite diverse.

SME / Contractor requirements can range from having the correct recognised competency and licences to operate general and specialised machinery, to holding qualifications in specialist areas like mining engineering and meeting NATA Accreditation Criteria (NAC).

In step with other capital intensive industries, project owners and managers in the mining sector prefer to engage with businesses that carry a low-risk profile and prior experience with similar projects.

| COMPLIANCE | DESCRIPTION |
|---------------------------------------------|----------------------------------------|
| AS/NZS 3000:2007 | Wiring rules |
| AS/NZS 4801:2001 | Occupational health and safety |
| AS/NZS ISO 9001:2015 | Quality management system |
| ASTM ISO 9001-00 | Quality management system |
| BS OHSAS 18001:2007 | Occupational health and safety |
| Building Practitioner Accreditation | Licensed building practitioner |
| Bus Operator Accreditation | Demonstrated ability of skills |
| CAL | Contractor Accreditation Limited |
| Federal Safety Accreditation | Federal occupational health and safety |
| Internal policies | Internal policies in place |
| ISO 14001:2004 | Environmental management |
| ISO 9001:2008 | Quality management system |
| National Association of Testing Authorities | Demonstrated ability of skills |
| National Heavy Vehicle Accreditation Scheme | Safety and management system |
